

PROGRAMMING TOOL

The NFA-T01PT Programming Tool serves as a versatile programming tool for the NFA-T family products. Designed to accommodate various device parameters, including address, sensitivity, mode, and types, it ensures compatibility with site-specific conditions and environmental requirements. Additionally, this programmer can retrieve previously encoded parameters for testing and troubleshooting purposes. Its compact and robust design makes it convenient for use in the workplace. The NFA-T01PT comes equipped with twin 1.5V AA batteries and a cable, ready for immediate use upon receipt. With an intuitive display and functional keys, it allows for easy activation of commonly used parameters.

FEATURES & BENEFITS

- Write, read and delete device parameters
- Pluggable cable with end alligator clip to hold tight the terminals
- LCD display and functional keys
- Low current consumption for longer battery lifespan
- Circuit protection against clip
- Auto power off within 3 minutes
